Why is this cool?

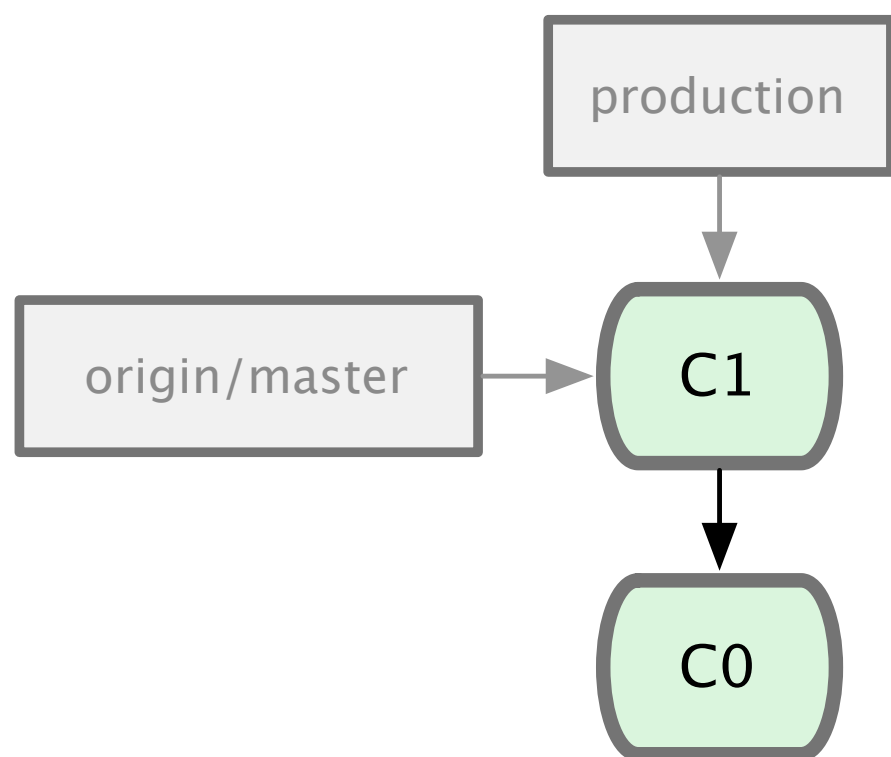

HAVE YOU SEEN THIS CAT?

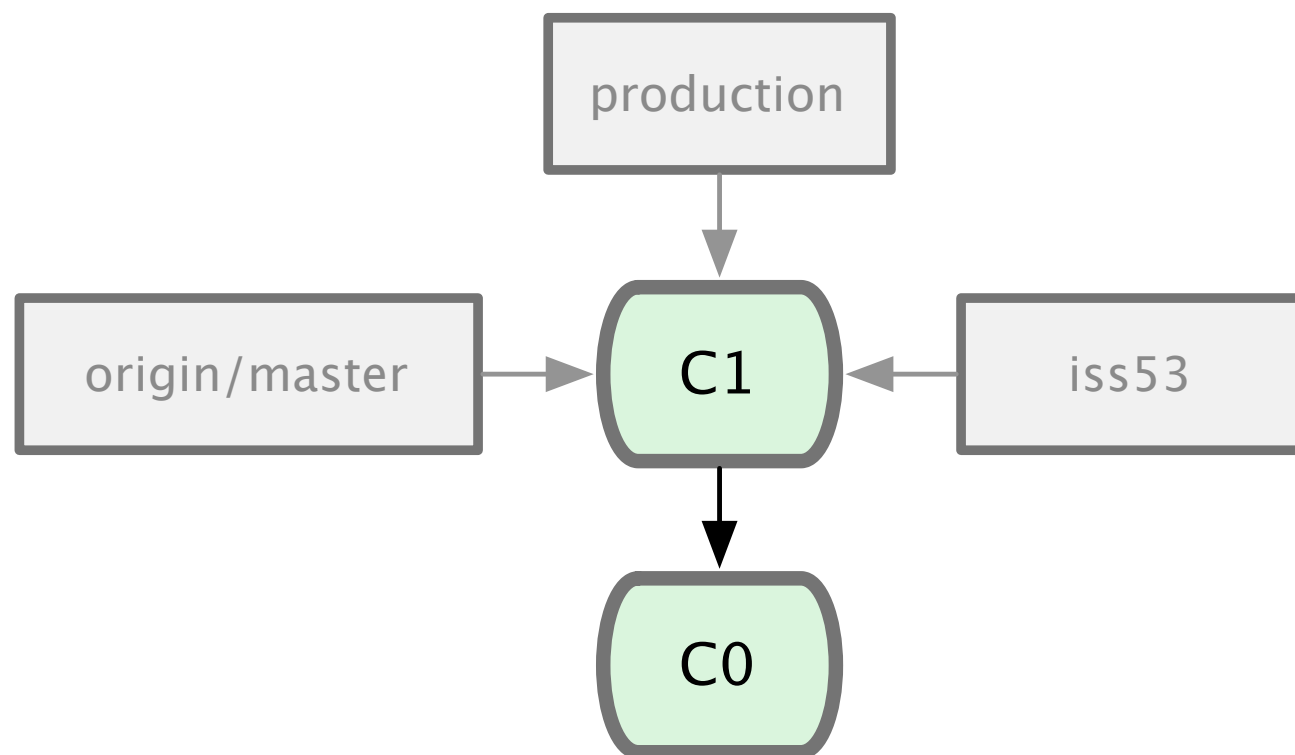

BECAUSE IT IS
AWESOME.

non-linear development

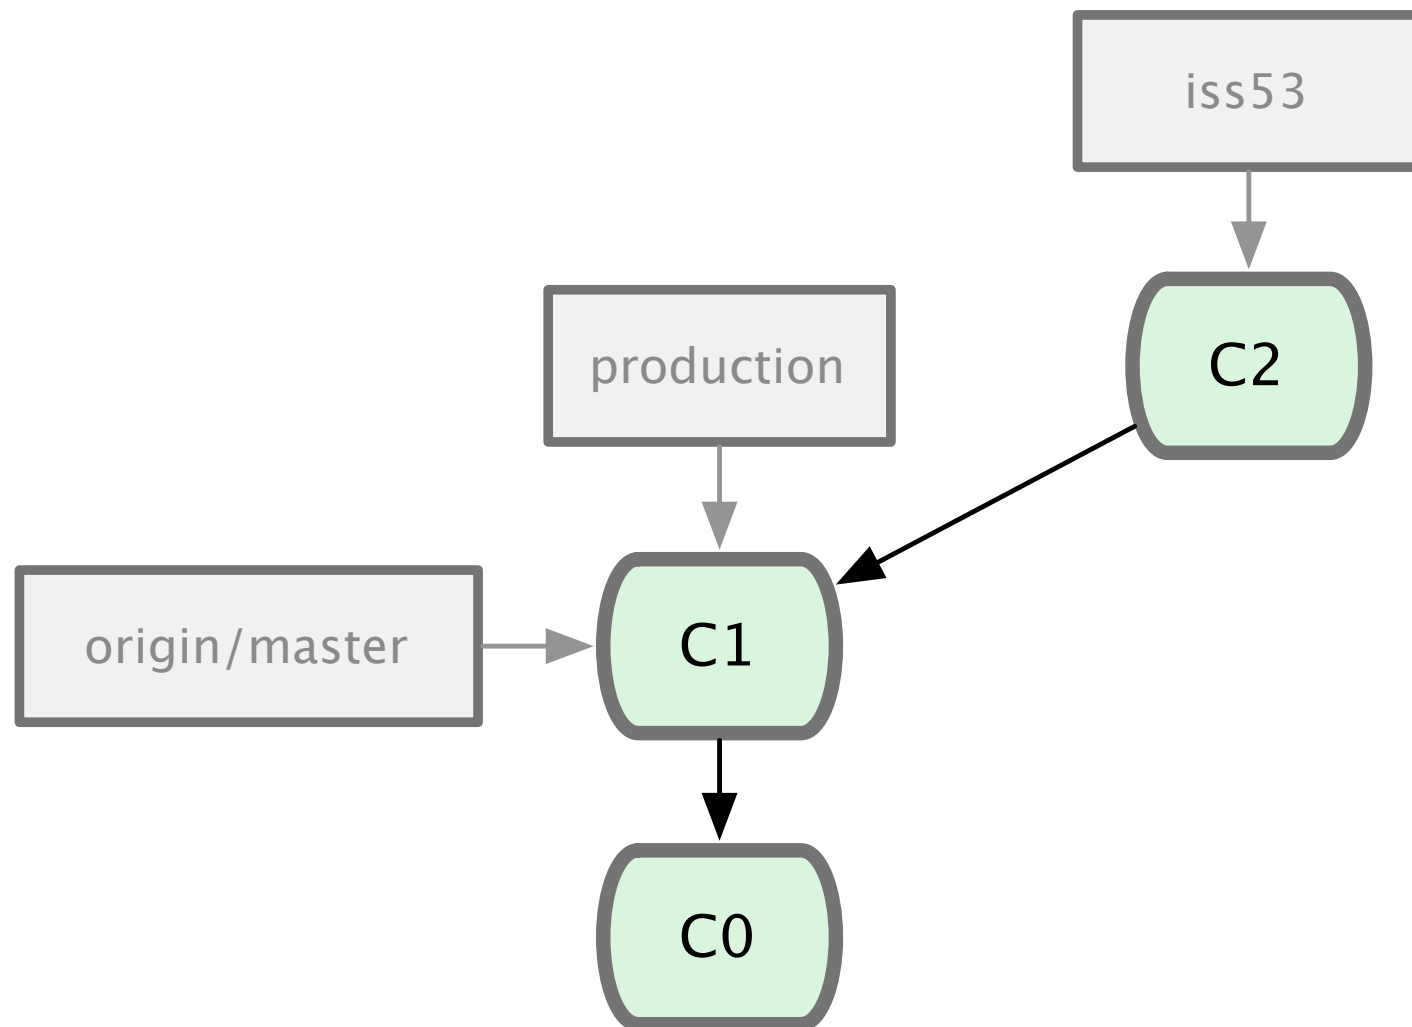

- clone the code that is in production
- create a branch for issue #53 (iss53)
- work for 10 minutes
- someone asks for a hotfix for issue #102
- checkout 'production'
- create a branch (iss102)
- fix the issue
- checkout 'production', merge 'iss102'
- push 'production'
- checkout 'iss53' and keep working

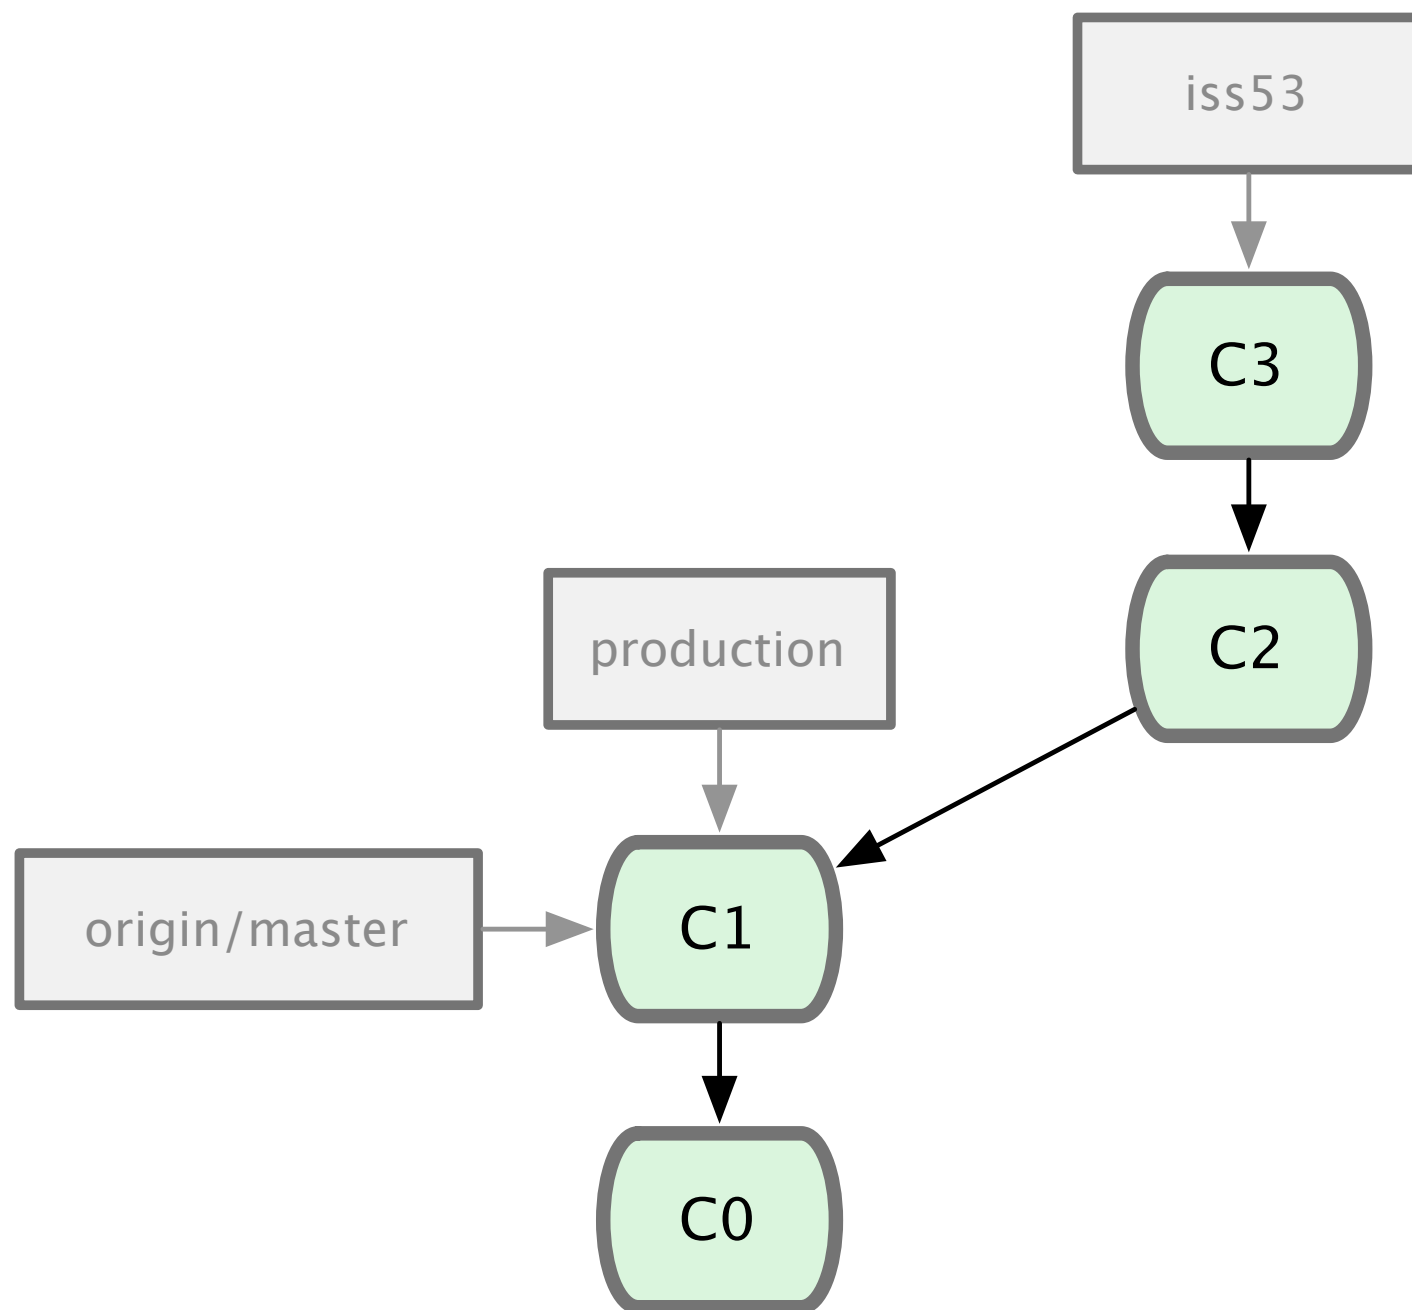

git clone

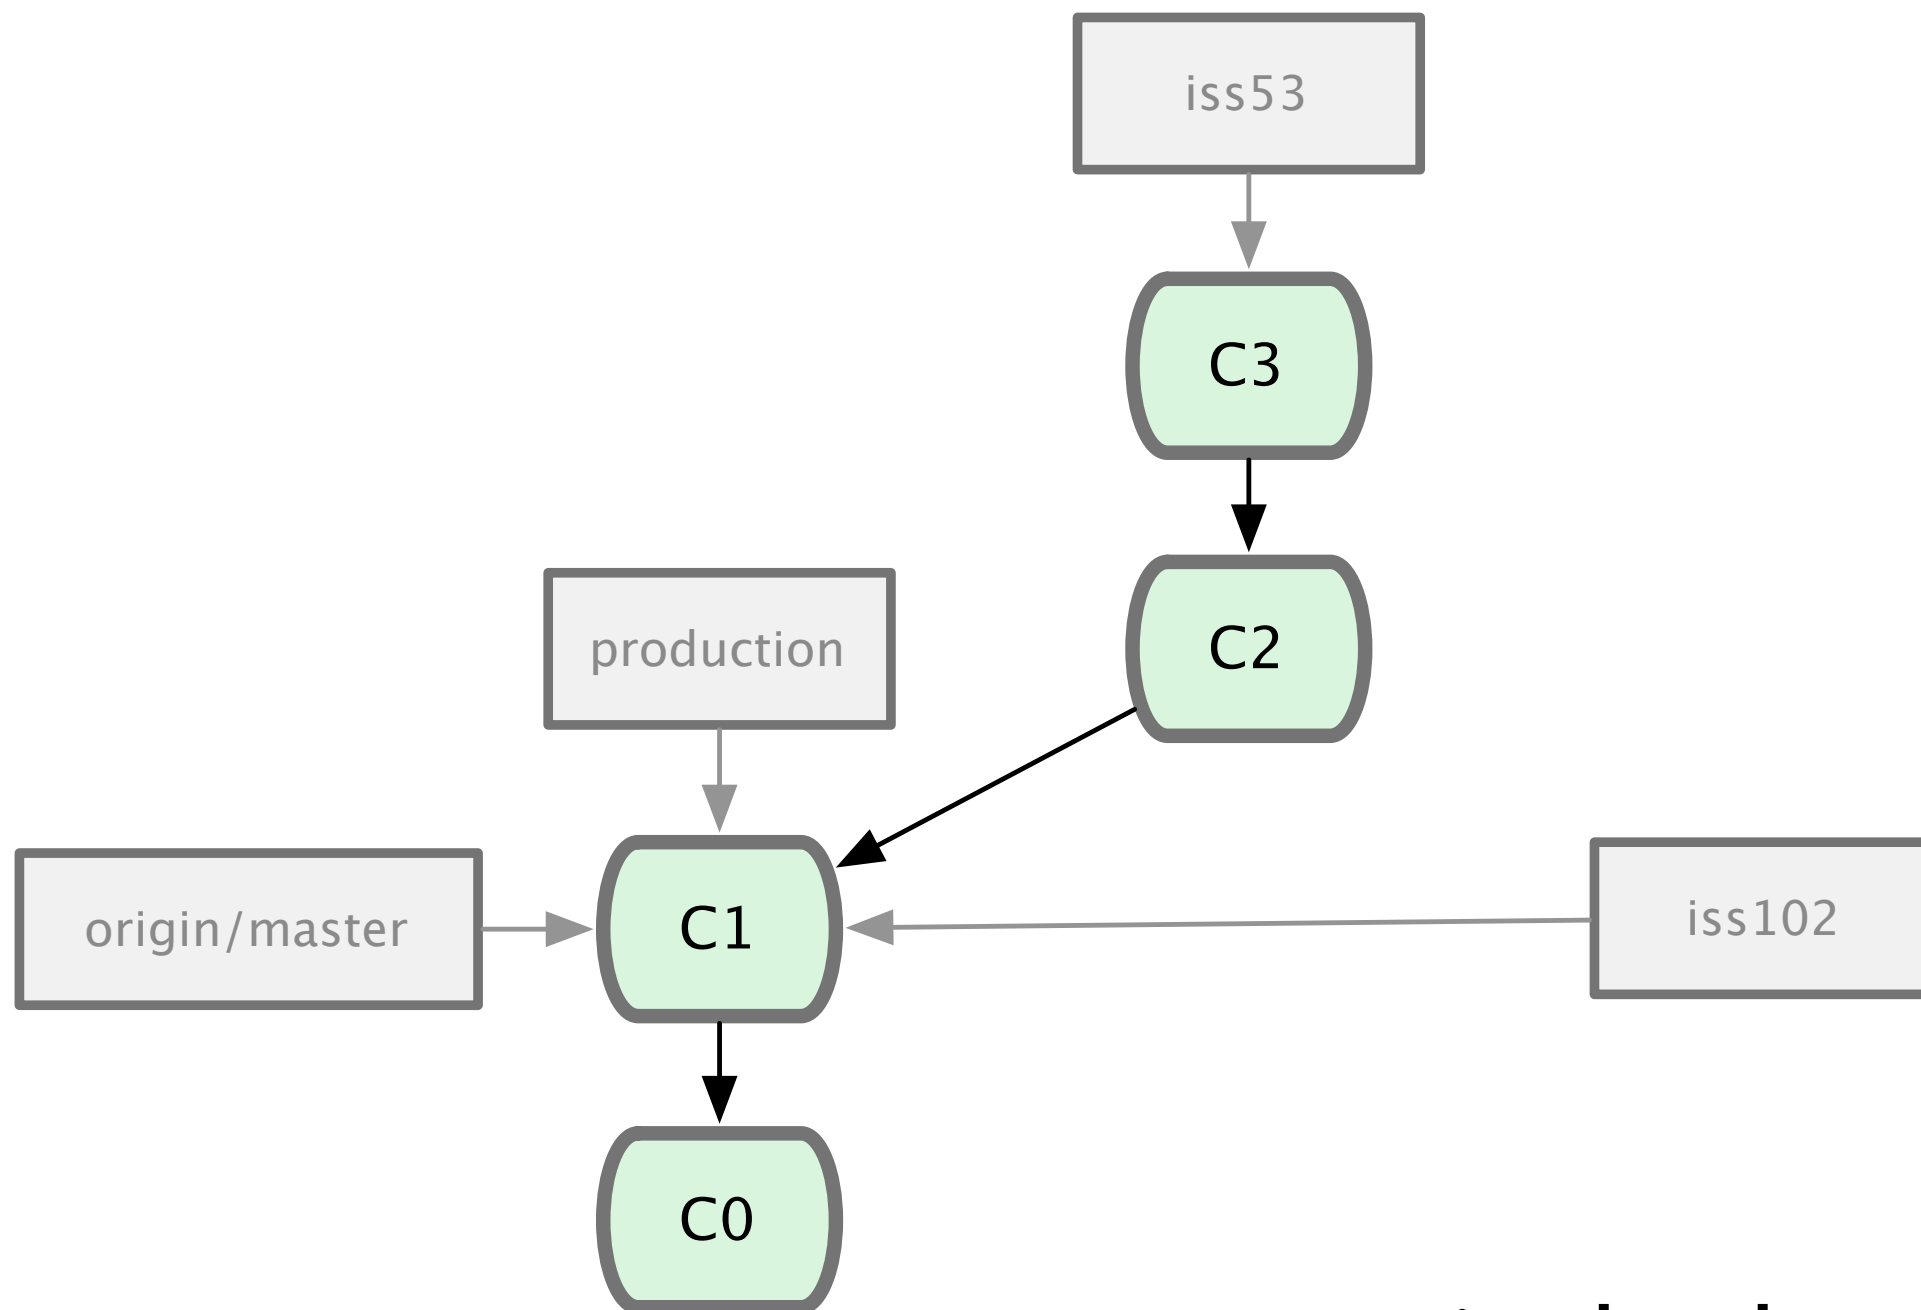

git checkout -b iss53

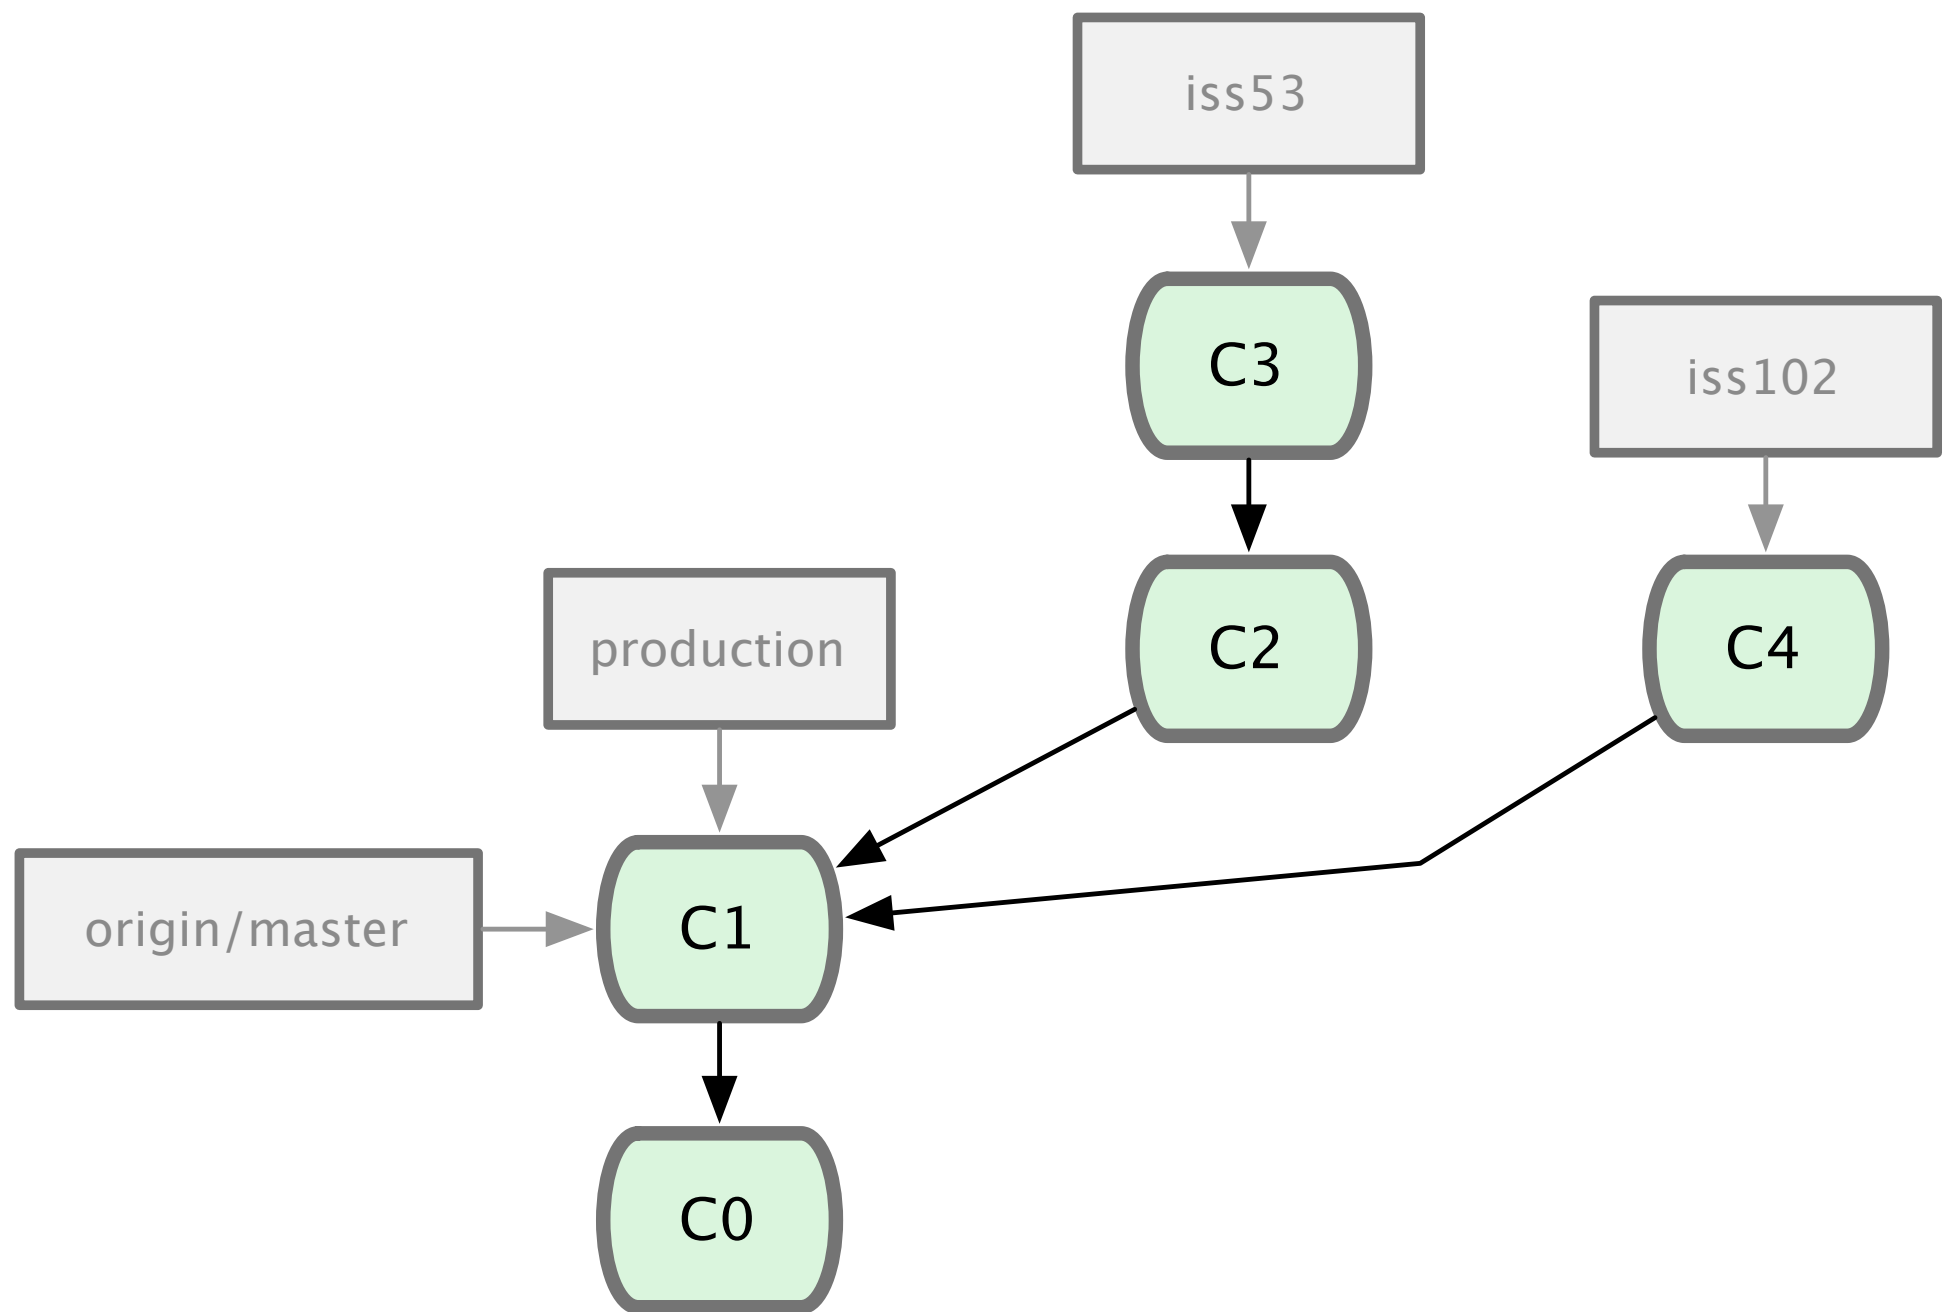

git commit

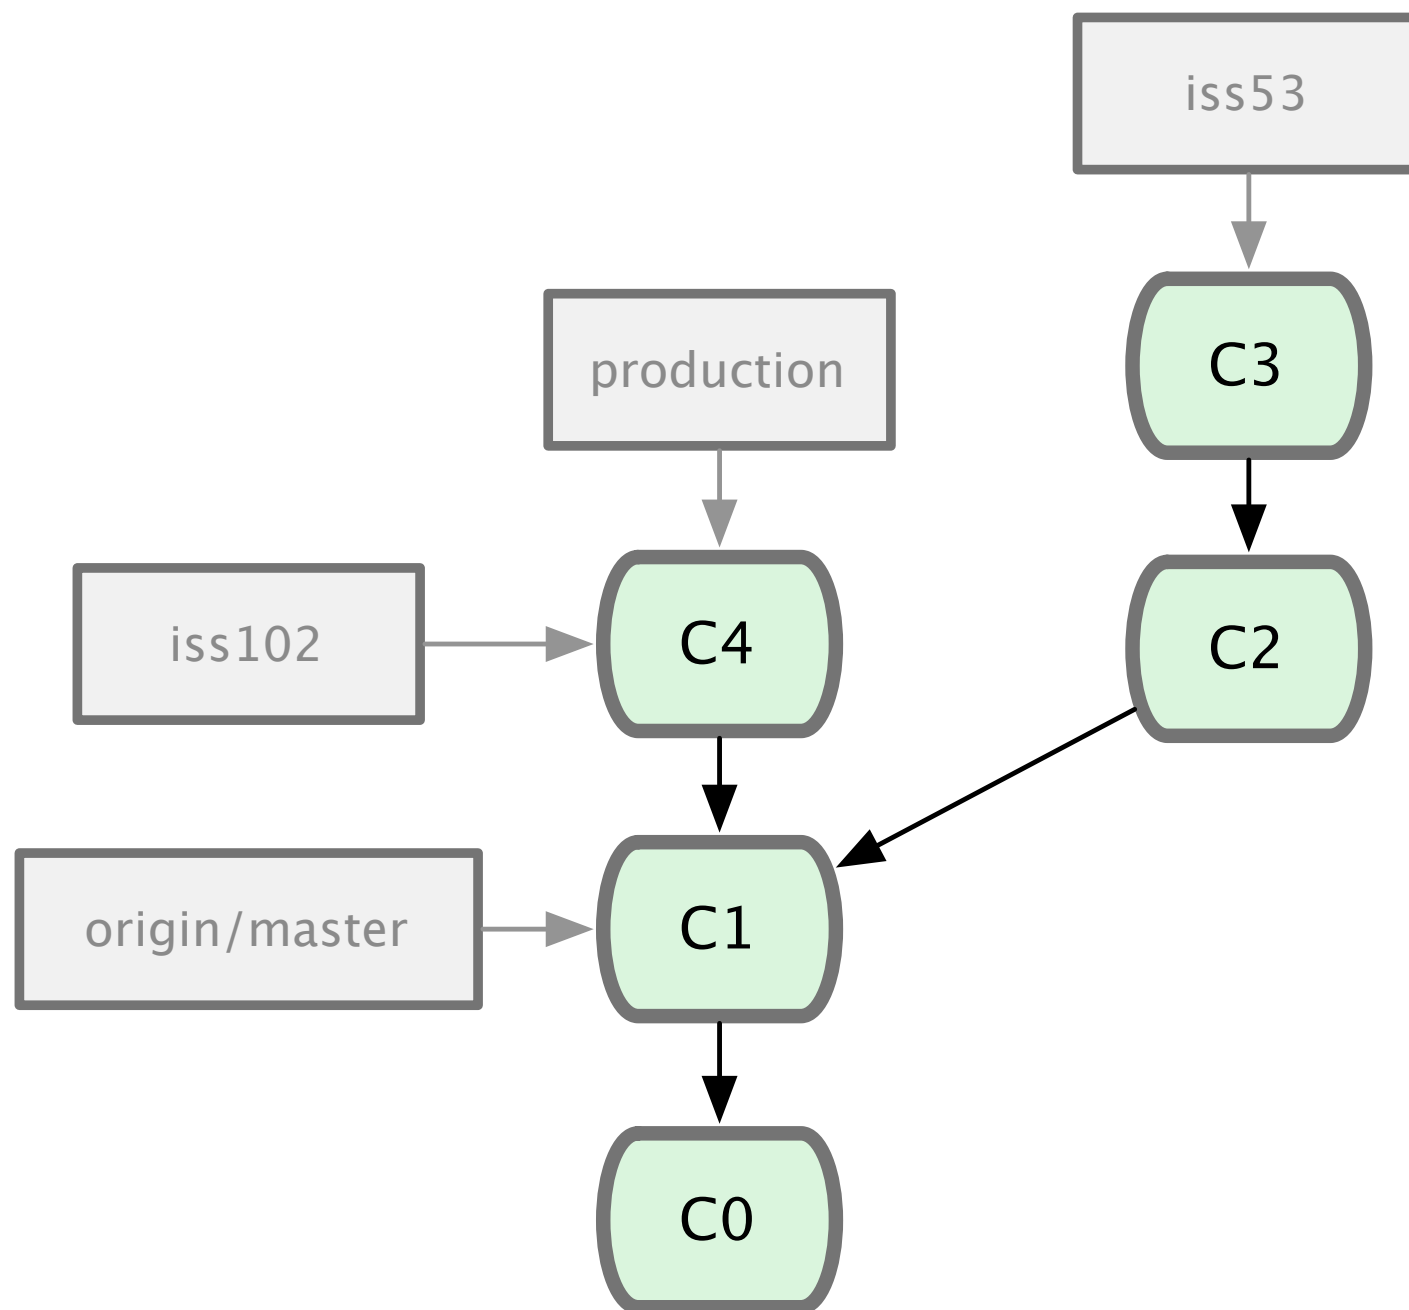

git commit

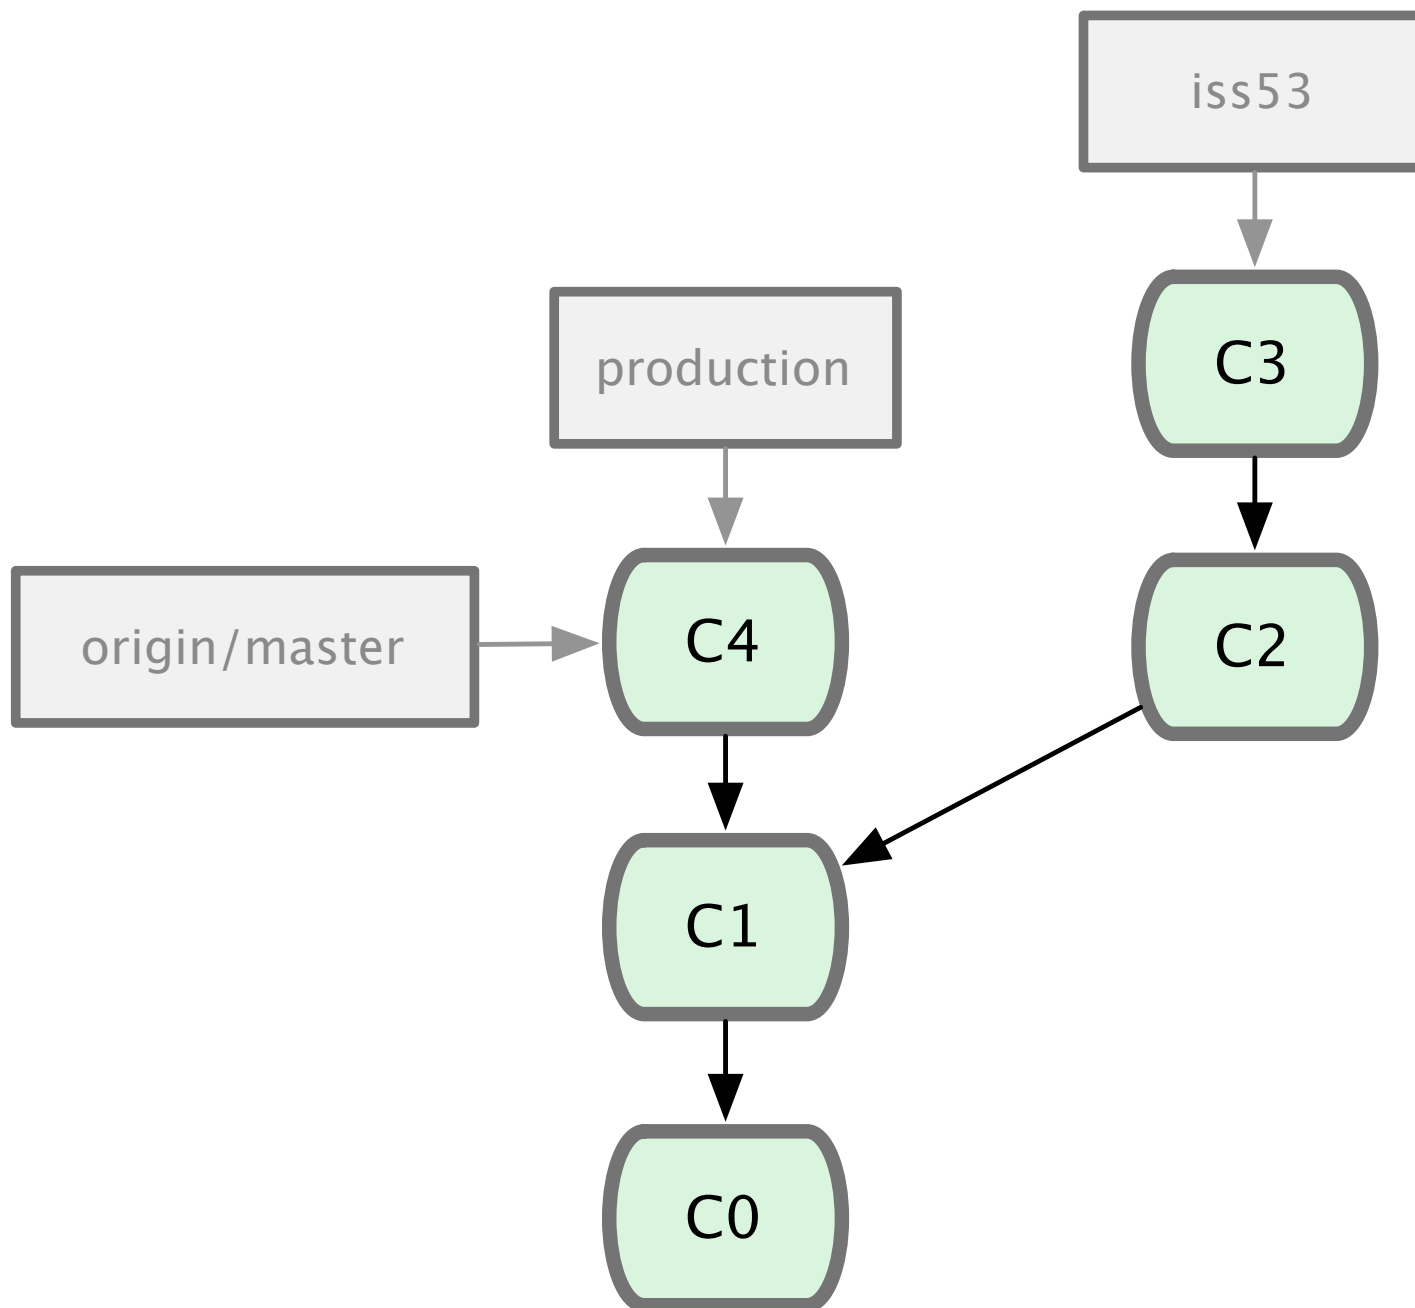

git checkout production
git checkout -b iss102

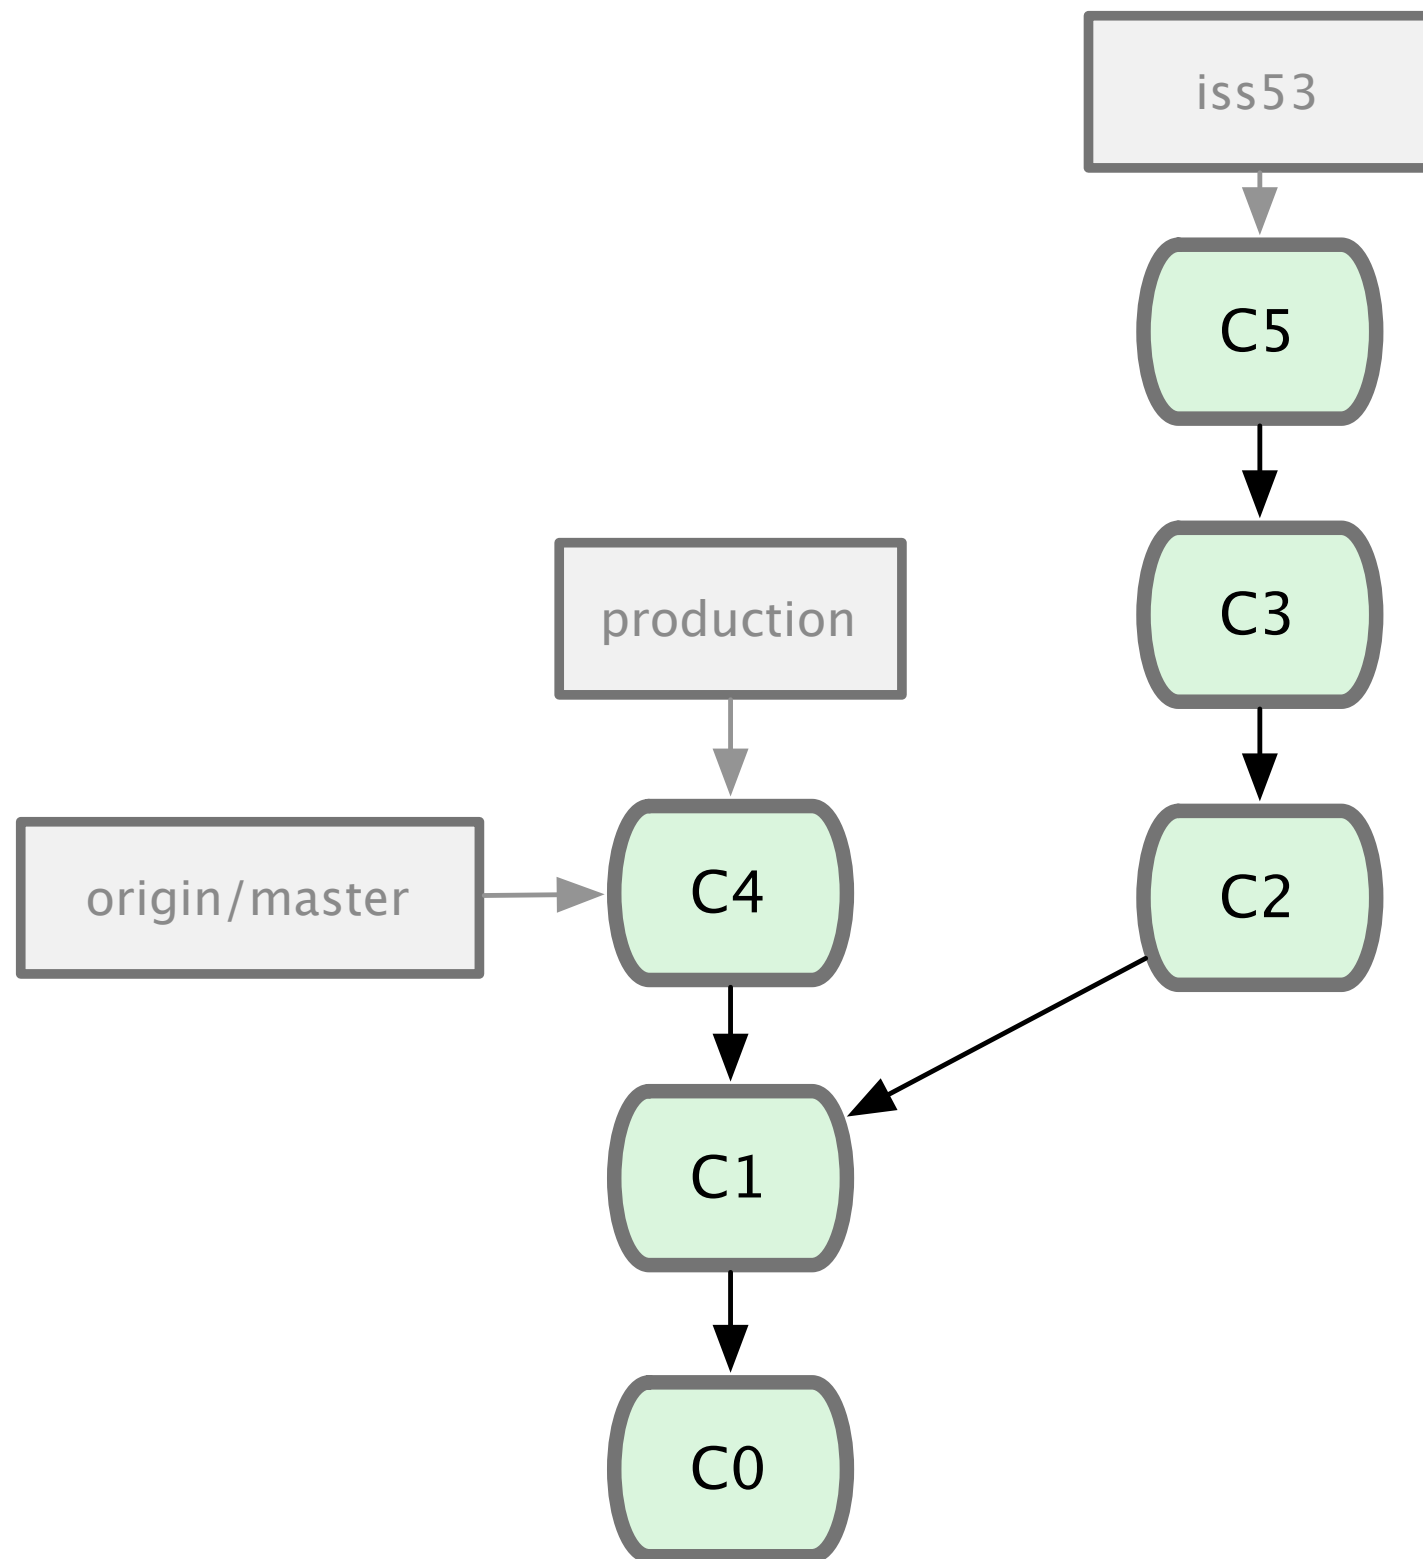

git commit

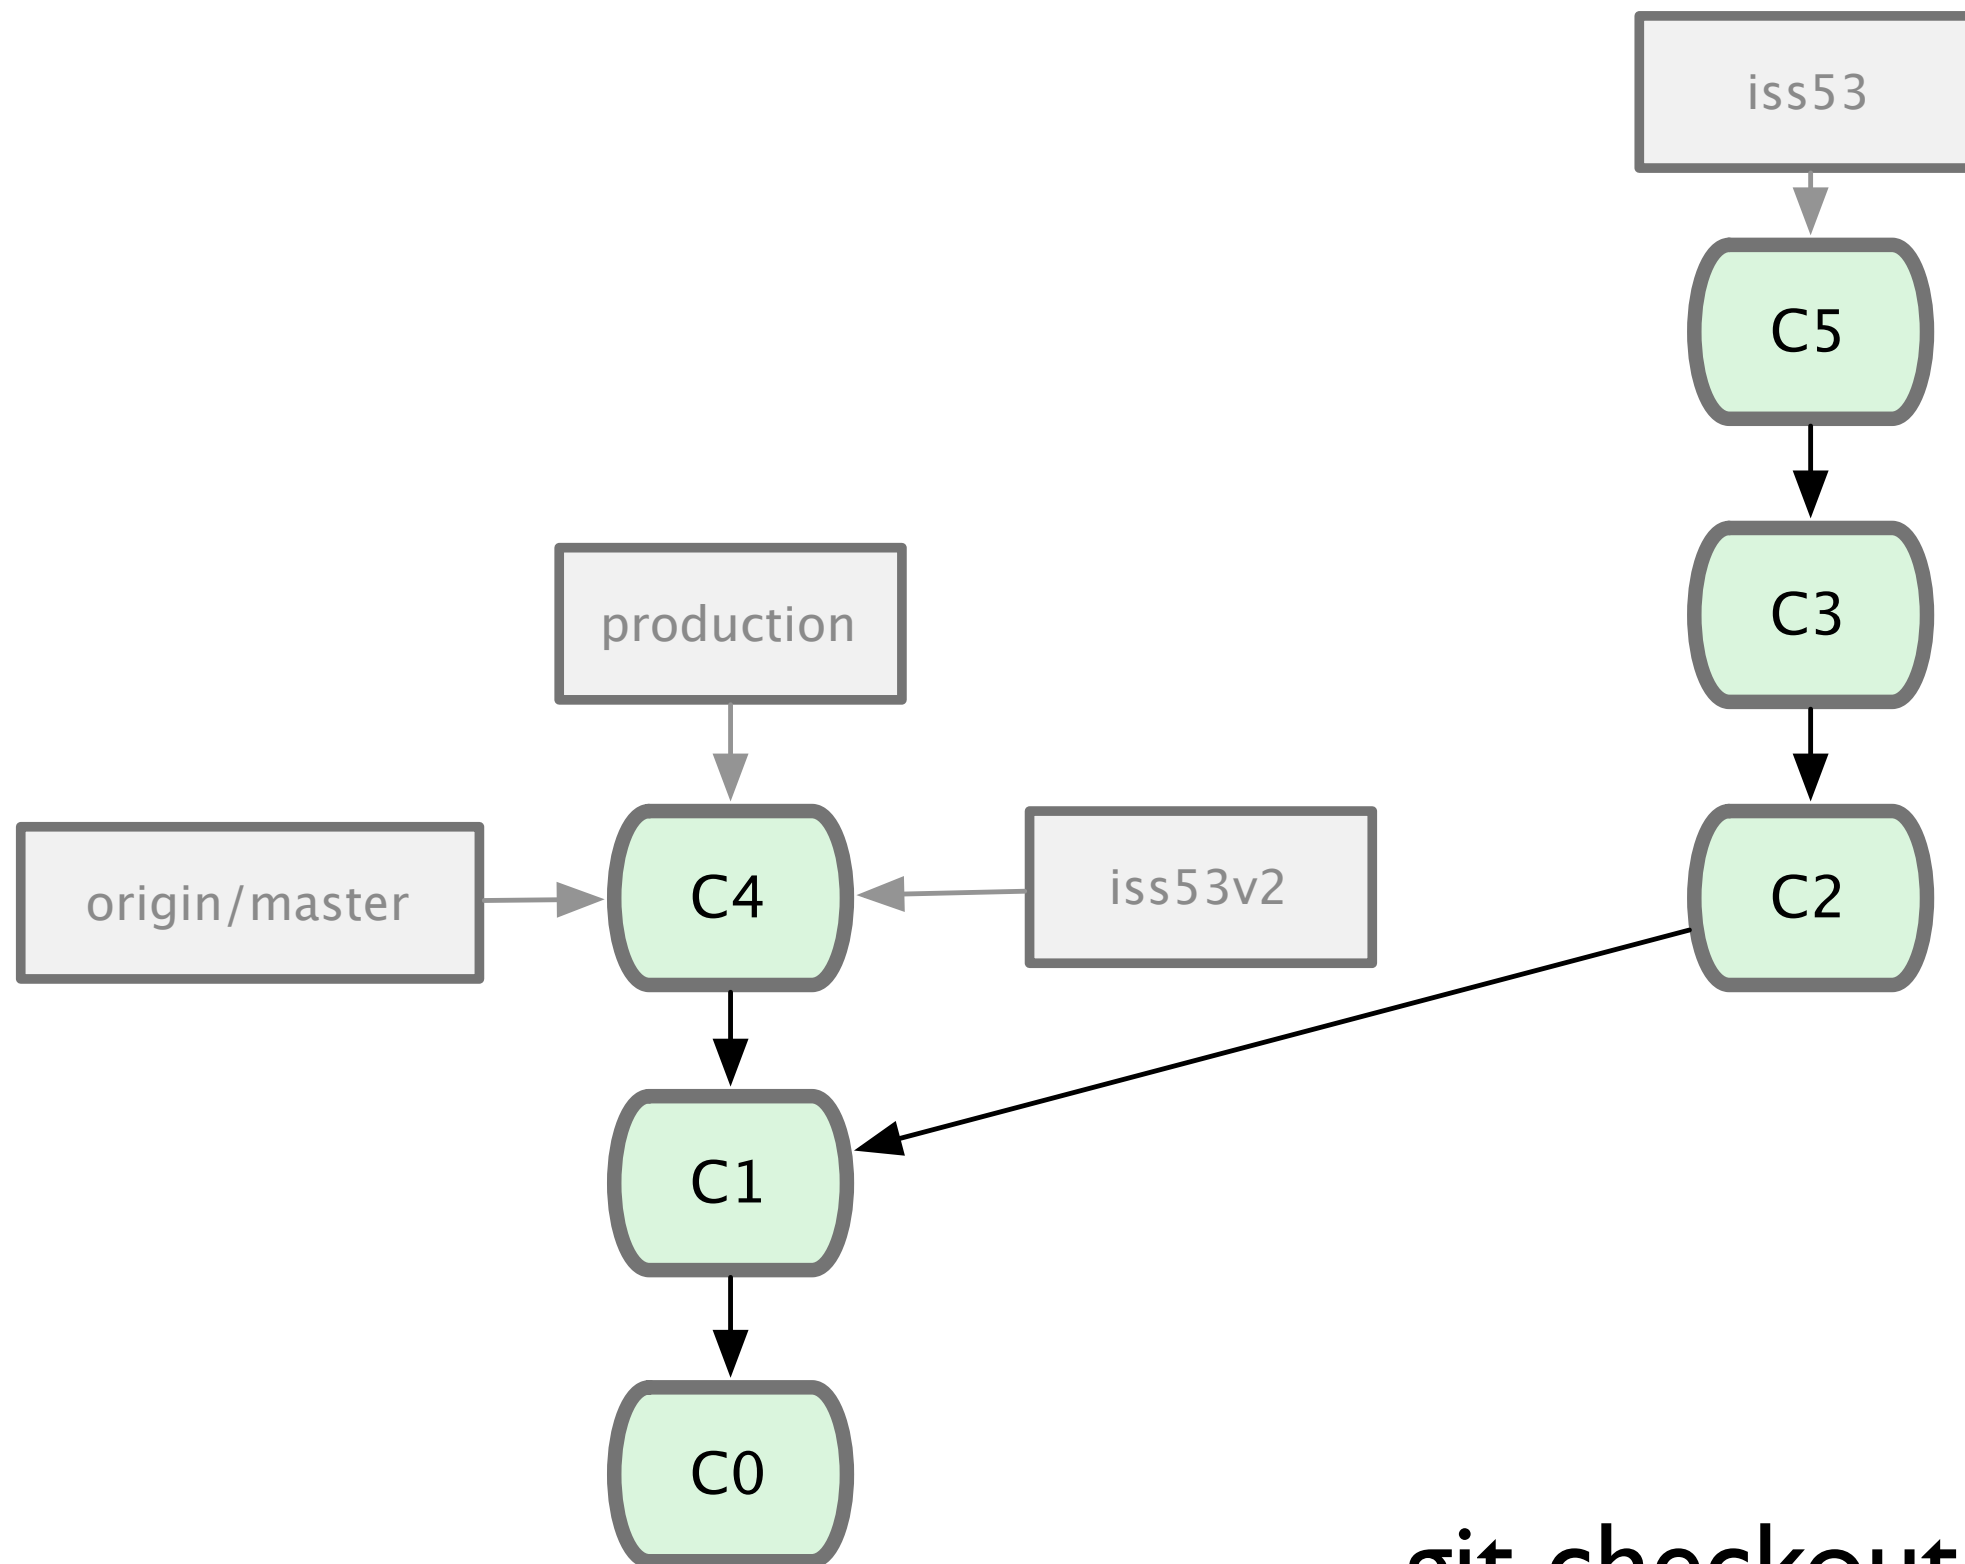

git checkout production
git merge iss102

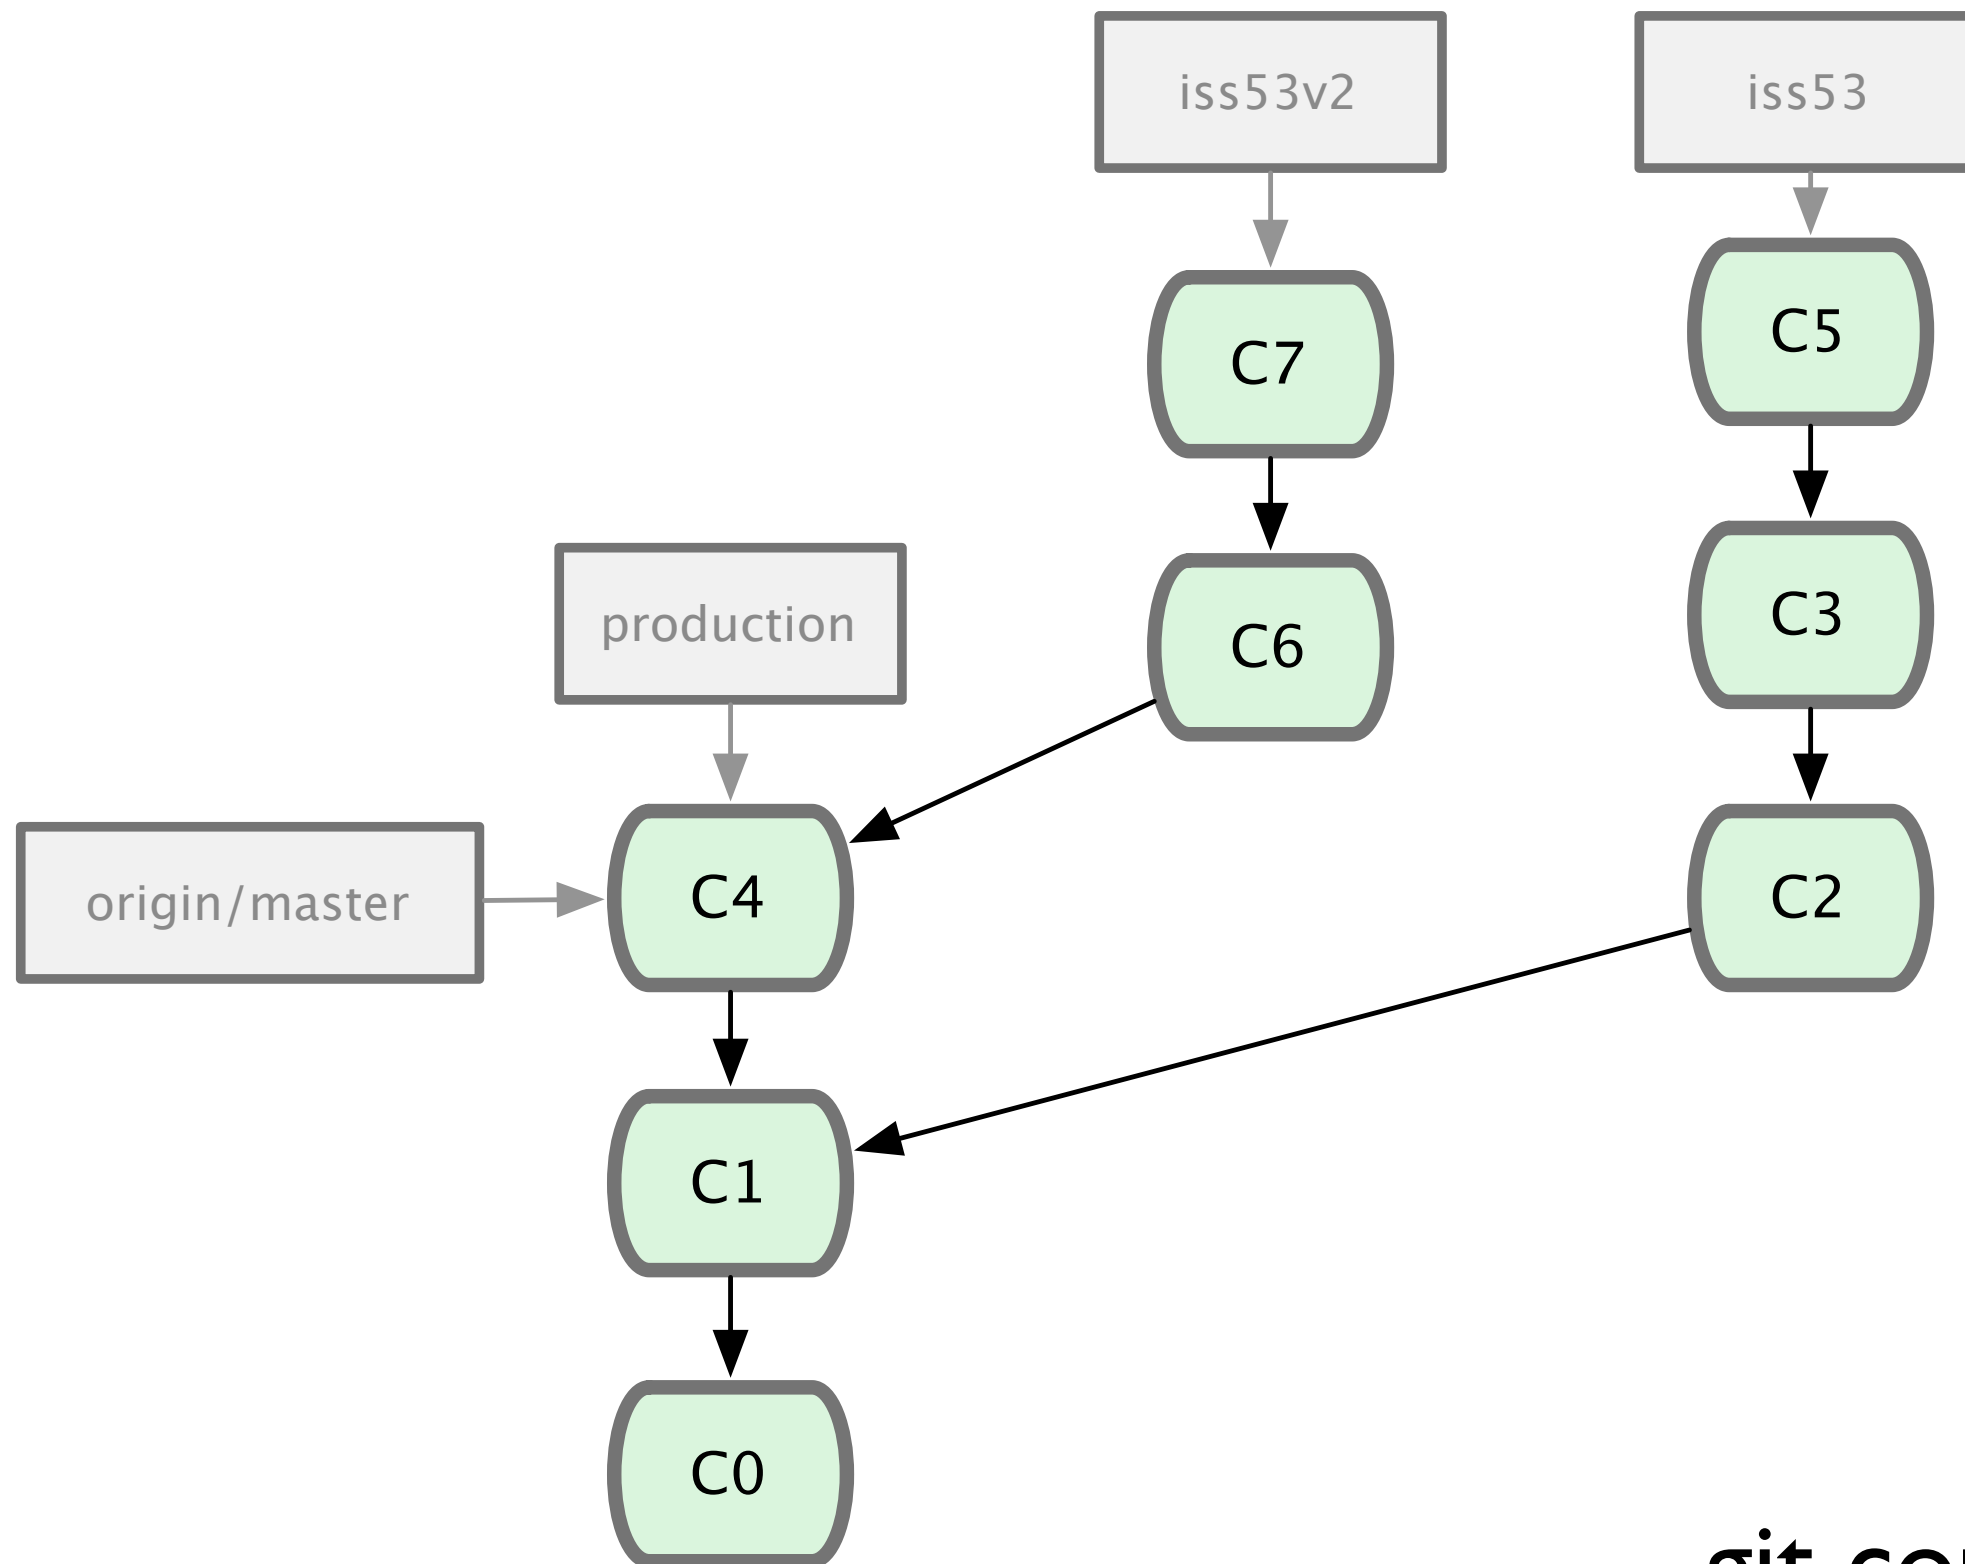

git push

git checkout iss53
git commit

git checkout production
git checkout -b iss53v2

git commit
git commit

try out an idea

isolate work units

long running topics

Stashing

when a commit is
too much

```
$ git status
```

```
$ git status

Running a Git Server

repo & gerrit

tools for building and
contributing to android

mac?

Repo

what is repo?

glorified for-loop

starting with repo

```
$ curl http://android.git.kernel.org/repo >~/bin/repo
```

```
$ curl http://android.git.kernel.org/repo >~/bin/repo
```

```
$ chmod a+x ~/bin/repo
```

```
$ curl http://android.git.kernel.org/repo >~/bin/repo
```

```
$ chmod a+x ~/bin/repo
```

```
$ mkdir working-directory-name
```

```
$ curl http://android.git.kernel.org/repo >~/bin/repo
```

```
$ chmod a+x ~/bin/repo
```

```
$ mkdir working-directory-name
```

```
$ cd working-directory-name
```

```
$ curl http://android.git.kernel.org/repo >~/bin/repo
```

```
$ chmod a+x ~/bin/repo
```

```
$ mkdir working-directory-name
```

```
$ cd working-directory-name
```

```
$ repo init -u git://android.git.kernel.org/platform/manifest.git
```

```
$ curl http://android.git.kernel.org/repo >~/bin/repo
```

```
$ chmod a+x ~/bin/repo
```

```
$ mkdir working-directory-name
```

```
$ cd working-directory-name
```

```
$ repo init -u git://android.git.kernel.org/platform/manifest.git
```

```
$ repo sync
```

normal work cycle

sync your repo

```
$ repo sync
```

```
$ cd kernel/common
```

```
$ cd kernel/common
```

```
$ git fetch; git merge origin/branch
```

```
$ cd kernel/common
```

```
$ git fetch; git merge origin/branch
```

```
$ cd platform/bootable/diskinstaller
```

```
$ cd kernel/common  
$ git fetch; git merge origin/branch  
$ cd platform/bootable/diskinstaller  
$ git fetch; git merge origin/branch
```

```
$ cd kernel/common
$ git fetch; git merge origin/branch
$ cd platform/bootable/diskinstaller
$ git fetch; git merge origin/branch
$ cd platform/external/aes
$ git fetch; git merge origin/branch
...
```

starting a topic branch

```
$ repo start branchname [project]
```

project status

```

Change 8640: Remove the protobuf based HTTP upload code path

▼ Description

Remove the protobuf based HTTP upload code path

Now that Gerrit2 has been released and the only supported upload protocol is direct git push over SSH we no longer need the large and complex protobuf client library, or the upload chunking logic in `gerrit_upload.py`.

Change 8670: Display "Anonymous Coward" in dashboards of users without names

Description

Display "Anonymous Coward" in dashboards of users without names

This is slightly better than showing the name as "undefined", due to the full name field being Java null/JavaScript undefined.
